***Summary:** The age of information we live in imposes the need for the use of modern information and communication technologies in all aspects of life and work - including the field of military operations. Information has always been one of the parameters of power, but in recent decades, rapid advances in information and communication technologies have made it a key factor in winning battles and wars. If the general history of war is considered more closely, it is easy to understand how important is the timely and valid information about the state of the opposing forces in each conflict. In this respect, successful interoperability is vital, that is, mutual communication of units of all branches of the armed forces of different countries.*

***Keywords:** interoperability, command and information system*
