**Abstract:** *This paper will be of the above method of multivariate analysis, which have the widest scope of application in various areas of the economy. The general assessment is that the application of multivariate analysis methods in economics in Serbia is relatively poorly represented, one might say, and neglected, and it is expected that this work is important for its popularization. Work should be a comprehensive statement of the most popular software packages that include procedures for the application of multivariate analysis methods, of which at least some use to us.*

**Keywords:** *multivariate analysis, economics, software packages*
