Abstract: *Space tourism is one of the most unusual forms of selective tourism, belongs to the category of adventure tourism and for the first time appears as an idea of the last years of the 20th century. It's up to reality today. On April 28, 2001, American businessman Denis Tito (a graduate aeronautist and magister of engineering science, worked as a NASA scientist) became the first tourist in the universe, paying \$ 20 million for a trip to the International Space Station "Mir", which he left with Russian crew, because NASA refused him. He passed the physical fitness test and basic training in June 2001 into the space flight of the Sojuz TN-32. He agreed to the International Space Station "Mir", where he spent a total of 7 days, 22 hours and 4 minutes in orbit.*

Key words: *Space tourism, Denis Tito, programs of space and adventure activities, International space station "Mir"*
